

BALLOT RESULTS

Letter Ballot: OEOSC/OP

Ballot No.: 2013-4 TF approval of OP1.0110-5

Issued: August 20, 2013

Date Due: September 30, 2013

OEOSC ASC OP, Committee for Optics and Electro-Optical Instruments

Task Force 4: Adoption of ISO 10110 as an ANS

Number of voting members: **17**

Number of ballots required: **majority**

Number of ballots received: **8**

Title: TF4/OEOSC OP1.0110-5, Proposed American National Standard for Optics and Electro-Optical Instruments – Preparation of drawing for optical elements and systems – Part 5: Surface form indications

Question: **Shall the task force approve the subject standard and submit it to ASC OP for approval?**

8 Affirmative Comments, if any :

“In the Foreword to the ANS edition, numbered paragraph 4, the period at the end of the sentence should be inside the closed quote mark. However, since ISO follows the European convention of the period outside the closed quote mark, the first sentence of the Introduction would stay as it is.”

I do not like the use of the “preferred that specifications for rms deviation types be given in units of nm”. What does that mean? It is just a preference? Is it a default? It sure is not binding and sounds pretty darned wimpy. Change wording to “rms deviation types shall be specified in units of nanometers unless otherwise specified”

0 Negative w/reasons:

0 Abstain w/reasons:

Result: **Pass; PL to reconcile comments and submit to OP for approval**
