BS	4.1	NA	NA	te	“complex” is an insufficient description to indicate when more detail should be given to describe coating performance.	When required coating performance contains features more detailed than a typical cut off filter, or anti-reflection coating, they are to be described in separate specification documents, which shall be referenced in the drawings.	Rejected; this subjective requirement changes a recommendation to an ill-defined requirement. The subject will be raised with the ISO committee during the Part 9 ballot for consideration.
JN	Foreword	ANS	Organization	Ed	The name of the UCF representative is incorrect	Change the UCF representative to “Kathleen Richardson”	Accepted.
